eHealth Exchange

2014 Certified EHR Technology:

Transitions of Care Measure #2 / 170.314(b)(2)

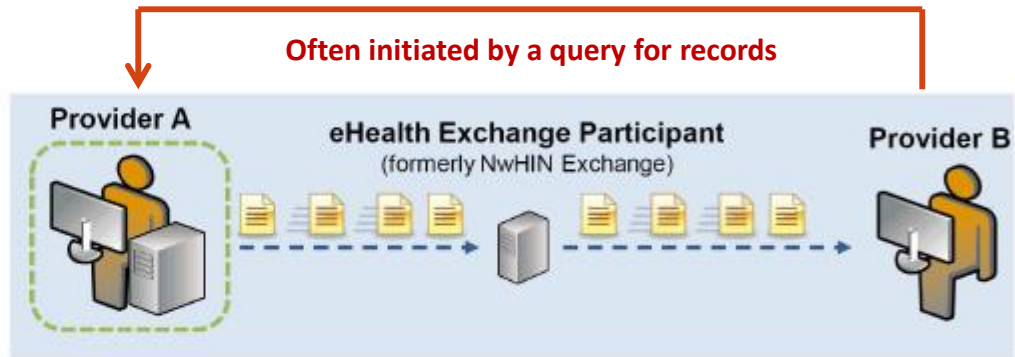

The EP, EH or CAH that transitions or refers their patient to another setting of care or provider of care, provides of summary of care record for more than 10% of such transitions and referrals as follows:

1. Electronically transmits C-CDA using CEHRT to a recipient using Direct or Direct + XDR/XDM transport protocols;
2. Electronically transmits C-CDA using CEHRT to a recipient using SOAP transport protocols; and/or
3. Where the recipient receives the summary of care record via exchange facilitated by an organization that is an eHealth Exchange participant; or ~~in a manner that is consistent with governance mechanism that ONC establishes for the nationwide health information network~~

Transmit Summary Care Record Using eHealth Exchange Participant

Example 1

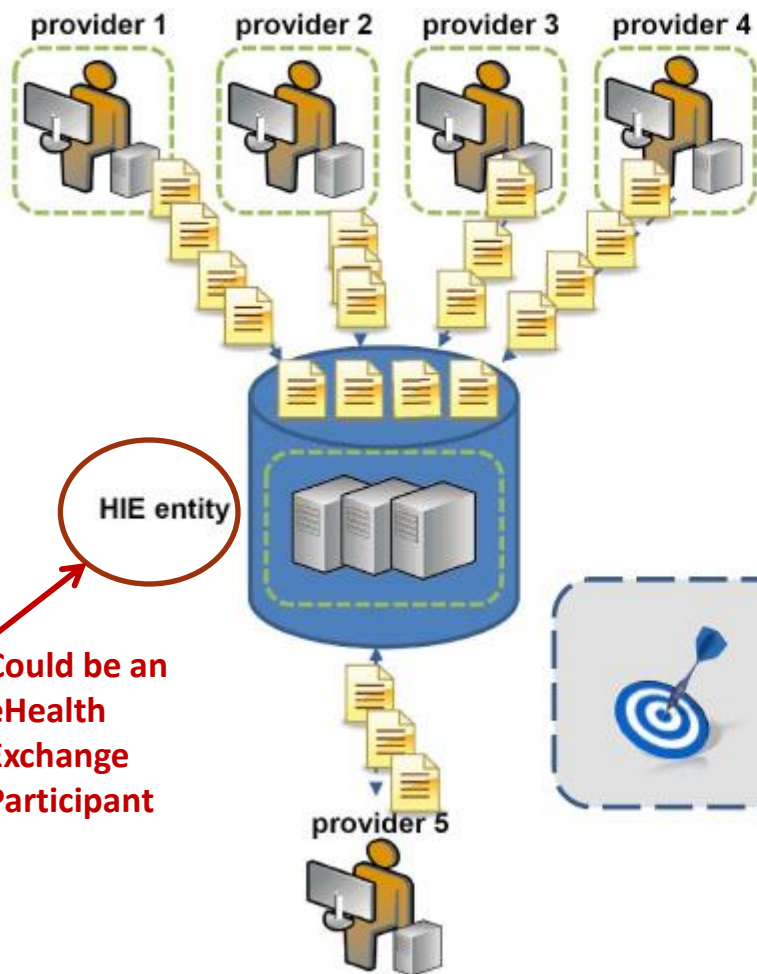

- NwHIN Example**
1. EHR generates CCDA
 2. EHR sends CCDA to eHealth Exchange Participant
 3. eHealth Exchange Participant sends to Provider B

 An eHealth Exchange Participant does not have to be certified in order for Provider A's transmissions to count for MU.

However, Provider A must still use CEHRT to generate a standard summary record in accordance with the CCDA.

Transmit Summary Care Record Using “Pull” or “Query” Infrastructure

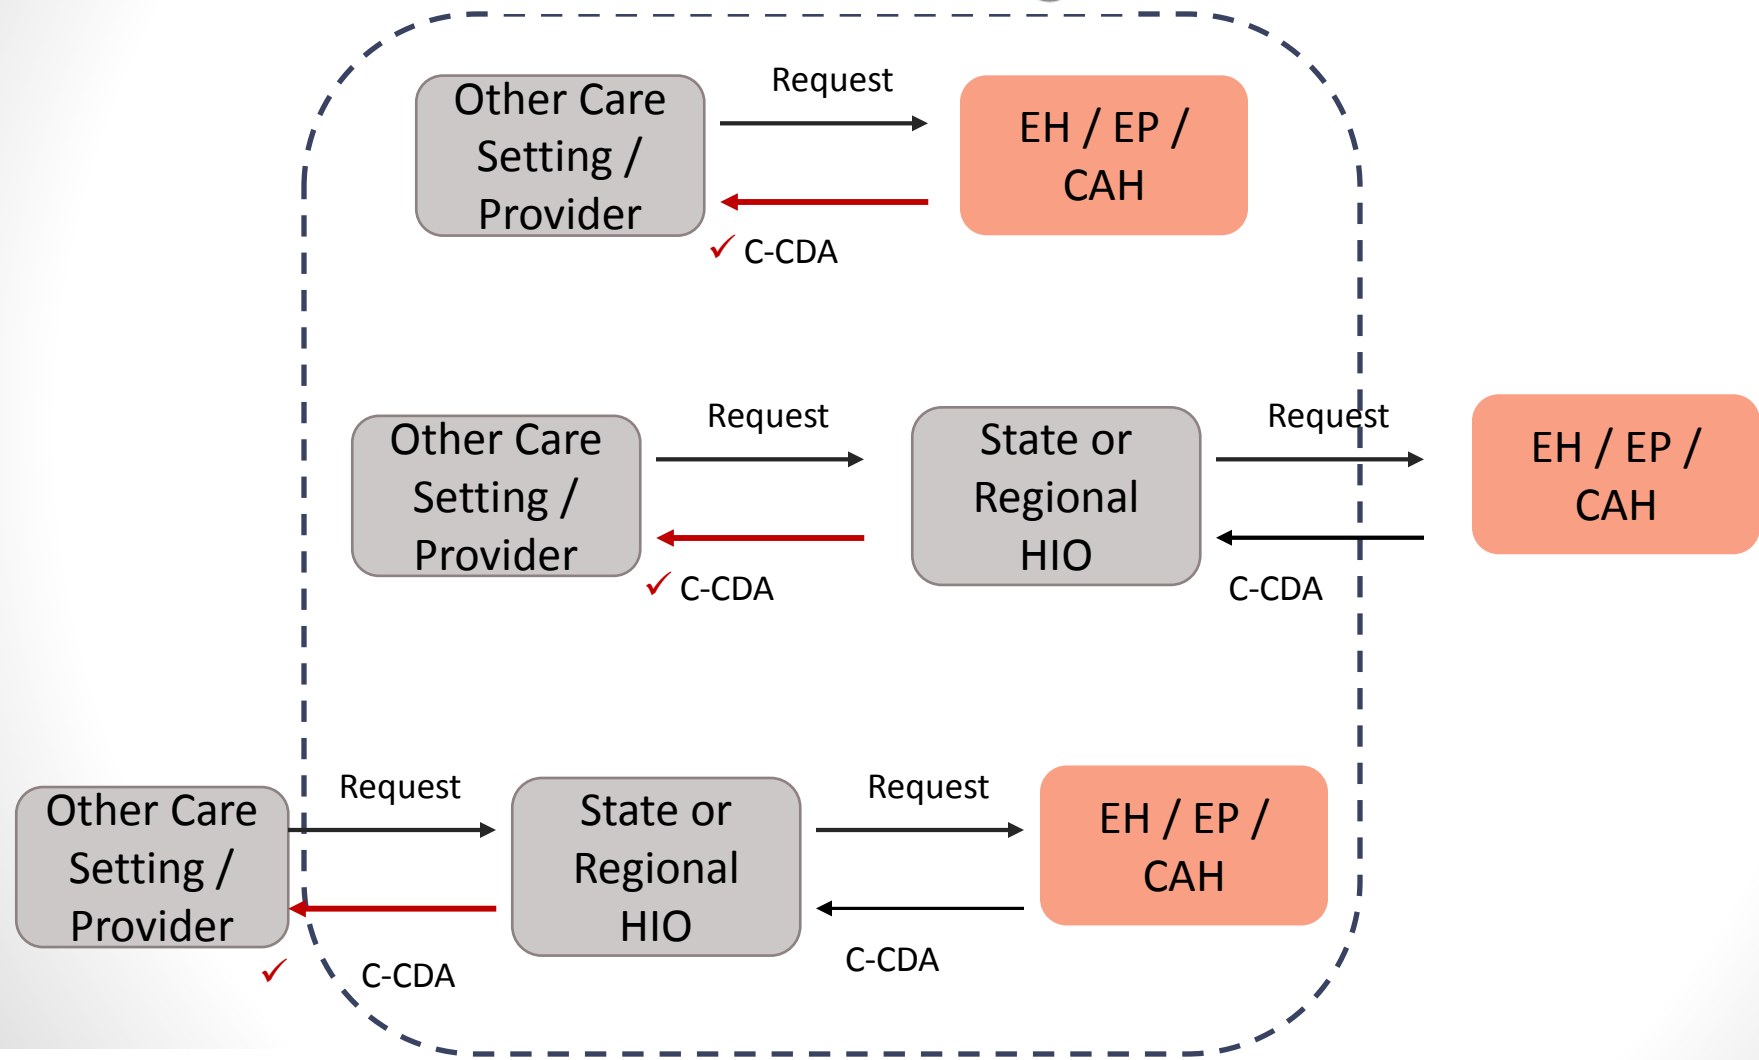

Providers #1-4 (1) have CEHRT, and (2) use the CEHRT's transport capability (Direct or SOAP) to send a CCDA to a HISP/HIE that enables the CCDA they've sent the HISP/HIE to be subsequently pulled by Provider #5.

Could be an eHealth Exchange Participant

 In this scenario, the HIE does not have to be certified.

eHealth Exchange Scenarios (TOC #2)

eHealth Exchange™

ONC / CMS FAQ #7697

- “...For the third approach, the EP, eligible hospital, or CAH must use its CEHRT to create a summary care record for transitions of care and referrals, but instead of using a transport standard specified in ONC’s certification criterion at 45 CFR 170.314(b)(2) (included as part of its CEHRT) to electronically transmit the summary care record, the EP, eligible hospital, or CAH may use a NwHIN Exchange participant to facilitate the electronic transmission to the recipient.”
...
- “Use of CEHRT to create a summary care record in accordance with the required standard (i.e., Consolidated CDA as specified in 45 CFR 170.314(b)(2)), and the electronic transmission is accomplished through the use of an eHealth Exchange participant who enables the electronic transmission of the summary care record to its intended recipient. Thus, EPs, eligible hospitals, or CAHs who create standardized summary care records using their CEHRT and then use an eHealth Exchange participant to electronically transmit the summary care record would be able to count all of those transmissions in their numerator.”
