# Laboratory Pain Point - Use Case - Standards Tracking

2		
3	<initial working name for it>	<b>Proposed Work Item Title</b>
4	<Describe the integration and/or workflow problem: What doesn't work, or what needs to work.>	
5	<Describe the Value Statement: what is the underlying cost incurred by the problem, what is to be gained by solving it. If possible, provide quantifiable costs, or data to demonstrate the scale of the problem.>	<b>The Problem Description</b>
6	<Describe how this will improve usability and for what stakeholders>	
7	<List existing systems that are or could be involved in the problem/solution.>	<b>Actors/Systems</b>
8	<Describe one or more short use case scenario(s) from the user perspective. The use case should demonstrate the current integration/workflow problem. Consider a chronological bullet list of "A does X with Y".>	
9	<Feel free to add a second use case scenario demonstrating how it "should" work. Try to show the people/systems involved, the tasks they are doing, the information they need, and hopefully where the information should come from.>	<b>Use Case/Clinical Scenario</b>
10	<Focus on the end user requirements, and not just the solution mechanism. Give concrete examples to help people trying to understand the problem and the nature of the solution required. Remember that other committee members reviewing the proposal may or may not have a detailed familiarity with this problem. Where appropriate, define terms.>	
11	<List relevant standards, where possible giving current version numbers, level of support by system vendors, and references for obtaining detailed information.>	<b>Standards</b>

- **Google Spreadsheet used for tracking**
  - Anyone with the link can comment within the documents
  - Contains Phase 2 IG Development
  - Parking lot of existing pain points
- Will be place for gathering Laboratory Data Exchange pain points
- Use Case will be included for Receiving System Guidance

# Standards & Use Case Discussion

## Standards being Considered

- Require HL7 2.5.1 as the floor going forward – update from 2.x
- USCDI V3 (Tests, Values/Results, Specimen Type, Result Status)
- USCDI+ (Public Health Laboratory Data Exchange)
- HL7 Version 2 Laboratory Value Set Companion Guide, Release 2 – US Realm
- HL7 Version 2.5.1 Laboratory Orders Interface (LOI)
- HL7 Version 2.5.1 Laboratory Test Compendium Framework (eDOS) aka Electronic Directory of Service
- HL7 Version 2.5.1 Laboratory Orders Interface (LRI)
- HL7 Version 2.5.1 Electronic Lab Reporting (ELR) to Public Health
  - CDC How to Implement ELR

# Laboratory Use Cases

Emphasis on improving data quality – for direct clinical use, feeding AI/ML, Clinical Trials, RWD/RWE, Research, etc.

1. Reference lab (or internal hospital lab) currently sharing data electronically to EHRs (sending system)reference lab already sends via HL7, but maybe not fully compliant
2. Establish best practices for receiving EHR or portal systems to display data from lab information systems AND minimum for sharing data via CCDA/FHIR
  - Note: these are not used by LIS/lab systems, but EHR to EHR sharing and HIEs, etc
3. Proposed target for discrete labs, e.g. chemistries, CBC, etc.
  - Start with a minimum set of labs (e.g. CBC and BMP) for compliance but ultimate goal is compliance for full discrete labs
  - Development of recommended value sets for grouping labs (target VSAC and lab standards bodies) – this is something that providers should be able to access and NOT reinvent themselves
